DETAILED ACTION

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3,7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watson et al (US 6235754; 5/22/01) in view of Bosserelle (US 4740432; 4/26/88), and JP 03251520; 11/11/91.

Watson teaches a shampoo for controlling lice comprising spinosad (spinosyn A and D). Watson's composition is applied to hair to rid hair of lice (ruminant or companion animals). See abstract, column 1 lines 10-34, column 4 lines 54-67, column 5 line 38-column 6 line 2.. Watson does not teach the shampoo comprising oleic acid and isopropyl myristate. Watson does not teach the shampoo comprising the instant amount (0.1-30 %) of spinosad. However, Bosserelle teaches a shampoo composition comprising 8 to 14 % oleic acid. See abstract, column 2 line 30 – column 3 line 27, claim 11. JP '520 teaches a shampoo composition comprising 0.1 to 20% isopropyl myristate. See abstract. The oleic acid and isopropyl myristate are compounds derived from vegetable. These compounds are more effective than fatty acid and ester thereof

Art Unit: 1616

derived from animal fat. They are more effective in that they are more compatible with epidermal of the head. See column 1 – column 2 line 44. It would have been obvious to one having ordinary skill in the art to have made a single composition comprising spinosad, oleic acid and isopropyl myristate. One having ordinary skill in the art would have been motivated to do this in an effort to make a composition that would have a good compatibility with the epidermis. With respect to the amounts of ingredients one having ordinary skill in the art would have been expected to determine the optimum amounts of ingredients. One would have been motivated to do this in order to make the most effective shampoo.

Election Requirement

Election is final after view of Applicant's arguments. The election of a composition comprising spinosyn A, isopropyl myristate, and oleic acid is not allowable. See art rejection above.
